

The OmniVista User Interface

This section gives an overview of OmniVista's user interface. It points out the elements and functionality that are common to most OmniVista applications. It explains the various ways to open and close applications, how to access status and notifications information, how to customize your view, and how to use OmniVista's help system.

The following example, taken from the Topology application, shows some of the window elements that are common to most OmniVista applications.

The layout and contents of the main application window will vary, depending on the requirements of the particular application. You may see tables, graphs, network diagrams, configurations screens, etc.

The tree control is a means of accessing other windows in the application. Applications with only one window normally do not have a tree control.

The application tray shows each of the applications running in the current window. The application highlighted in dark gray is the one which is currently active and visible. The other applications are running in the background. To view a different application, click on its icon in the application tray.

Using the Tool Bar

The tool bar includes the following tool icons:

	Hide/Show the Task Bar.
	Hide/Show the Tree Control. If an application does not make use of a tree control, this button will be disabled.
	Hide/Show the Status Panel
	Hide/Show the Tool Bar. Once you hide the tool bar, the only way to redisplay it is to uncheck the Hide Tool Bar option on the View Menu.
	Right size tree panel. Extends the tree panel width to accommodate the longest line of text.
	Show previous task in Browse History. When an action in one application causes a second application to display and become active, the Forward button in the second application becomes enabled. Click the Back button to return to the previous application.
	Show next task in Browse History. After using the Back button, the Forward button becomes enabled. Click the Forward button to return to wherever you were previously.
	Stop/Start polling. To disable polling, click on the green icon. To enable polling, click on the red icon.
	Close the current application.

In some applications a secondary toolbar displays inside the main application window. Icons for that toolbar include:

	Select Filter. Opens the Filter Selection Dialog. For more information, see the Filters help.
	Apply Filter/Disable Filter. Click the green icon to apply the selected filter. Click the red icon to disable the filter. For more information, see the Filters help.

	<p>Resize table columns. Expands each column to a size large enough to show the longest line of text.</p>
	<p>Select display area. When an application window contains an upper and lower window pane, click  to hide the lower pane and expand the upper pane. Click  to re-display the lower pane.</p>
	<p>Print Table. Prints the title of the table and the table headers of the columns as displayed. You can either shrink the table to fit the width of a page or print across as many pages as it takes to print all columns.</p>
	<p>Select Device using Groups. Selects groups of devices using one or more Physical or Logical (user-defined) maps.</p>

View Menu

Use the check boxes in the **View Menu** to hide or display the Task Bar, Tree Control, Status Panel, or Tool Bar. A checked box indicates that the item is displayed. An unchecked box means that the item is hidden. If the box is grayed out, then the item is not available for the current application.

Select the **Tasks...** menu option to display the Tasks window. For details, see Closing Applications, "Using the Tasks Window."

Select the **Devices By** menu option to view devices by IP address, name, both the IP address and the name, DNS, or both the DNS and the IP address. The **Devices By** menu option appears only for applications that include a device tree control (For example, Topology and Notifications both use a tree control.).

Launching Applications

To launch an application, use either the Task bar, or the Applications menu, or the right-click menu options in the Task bar.

Task Bar

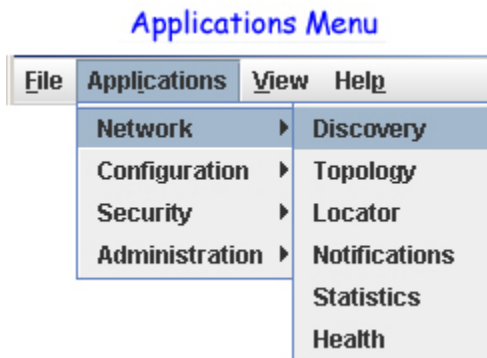

The Task bar displays a number of application groups, with each group containing one or more applications.

To launch an application, click the corresponding application group, and then click the desired application.

Applications Menu

You can also launch applications from the Applications menu.

From the Applications menu, point to an application group, and then select an application from the submenu.

Right-Click Menu Options

You can open as many applications as you want in a single window. However, only one application is displayed at a time. While the current application is displayed, the other applications continue to run in the background. To display a different application, click the corresponding button in the application tray. Instead of running all your applications in a single window, you can use multiple windows.

To open an application in a new or current window, right-click the desired application in the task bar. A pop-up menu is displayed as shown below. To open the application in a new window, click **Run in new Window**. To open the application in the current window, click **Run in current Window**.

Closing Applications

There are several ways to close an application. These include:

- File > Close [Application]
- File > Close Window
- File > Exit
- Using the "close application" icon
- Using the "application tray"
- Using the Tasks Window

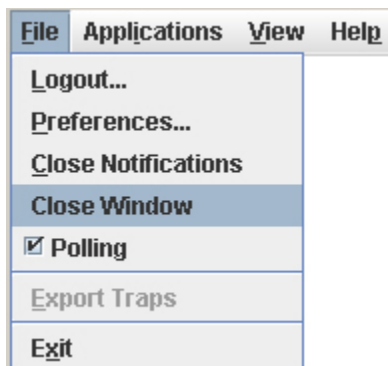

See below for a description of each method.

File > Close [Application]

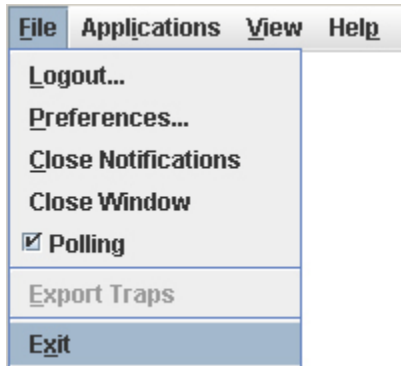

Select **File > Close [Application]** to close the current application. Any other applications running in the same window will remain open. If there is only one application running in the window at the time you select File > Close [Application], the application closes, but the window remains open with just the OmniVista splash screen displayed.

File > Close Window

Select **File > Close Window** to close the current window and to close all applications running in that window. Any other windows remain open.

File > Exit

Select **File > Exit** to close all applications running in all windows, and to exit the OmniVista program.

Using the Close Application Icon

Use the Close Application icon  to close the current active application only. This is the same as selecting File > Close [Application].

Using the Application Tray

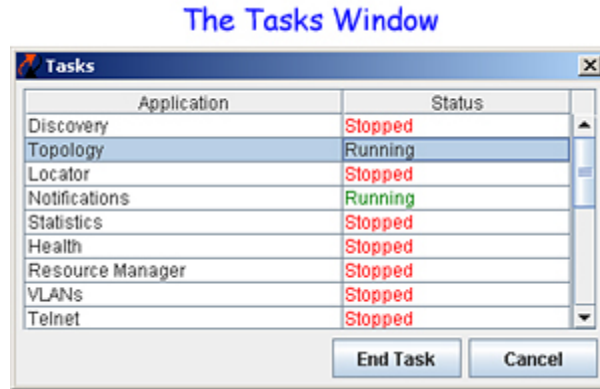

In the application tray, right-click on the name of the application you want to close. When the pop-up menu displays, click **Close**.

This is the same as selecting **File > Close [Application]** or clicking the Close Application icon .

Using the Tasks Window

Use the Tasks Window to terminate an application immediately. To access this window, select **View > Tasks**. Select a row in the table, then click **End Task**.

The Tasks Window is useful when the network is busy and closing an application using one of the other methods would take much longer.

Viewing Status Information

Status information can be found in the Status & Notifications Pane, and also in the Status Bar (see the illustration below).

Viewing Status Information

The screenshot shows the OmniVista 2500 interface with the Status & Notifications Pane open. The pane is divided into two main sections: a tree view on the left and a notification list on the right. The tree view shows a hierarchy of 'Notifications' under 'Switches', with a list of IP addresses (10.255.11.0/24) and their corresponding status icons. The notification list on the right displays a table of alerts for 'fanFailed Fan is inoperable' across various chassis and fan indices. Below the notification list is a table with columns for Date, Application, Type, and Message, showing recent system events like 'Polling service is on' and 'Polling service is off'.

Name	Synopsis	Ac
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: fan 2, Index: 65	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125
chassisTrapsAlert	fanFailed Fan is inoperable, Object: chassis 88, Index: 88	10.255.11.125

Date	Application	Type	Message
Mon Jan 16 21:42:04 PST 2006	OmniVista	Info	Polling service is on
Mon Jan 16 22:43:41 PST 2006	OmniVista	Info	Polling service is off
Mon Jan 16 22:43:42 PST 2006	OmniVista	Info	Polling service is on

Status & Notifications Pane

The Status and Notifications Pane

The Status & Notifications Pane displays either status information or trap notifications, depending on whether the Status Tab or the Notifications Tab is selected. The information displayed is for all OmniVista applications, and not just the current active application. This makes status and notifications information available at all times, from any application. For example, if you want to see a list of notifications, you do not need to be in the Notifications application; you can see the information while working from Topology, or Statistics, or any other application. The same is true for status information.

If the Status & Notifications Pane is not currently visible, select **View > Status Panel** from the toolbar. A checked box indicates that the Status & Notifications Pane is displayed. An unchecked box indicates that the window pane is hidden. You can also hide or display the Status & Notifications pane by clicking on the show/hide controls .

Status Tab

When the Status Tab is selected, the Status & Notifications pane shows information on current user activity. In the example below, the user has made a request to connect to switch 10.255.11.109, and the Topology application has responded by sending an informational message indicating that a connection is currently in progress.

The Status Tab

Date	Application	Type	Message
Mon Dec 19 10:11:00 PST 2005	OmniVista	Info	Polling service is on
Mon Dec 19 18:57:15 PST 2005	OmniVista	Info	Polling service is on
Mon Dec 19 18:58:48 PST 2005	PolicyView QoS	Info	Read com.alcatel.ov1.policies.shared.PolicyRule done.
Mon Dec 19 18:58:47 PST 2005	PolicyView QoS	Info	Reading com.alcatel.ov1.policies.shared.PolicyRule from database.

Status messages display from the time the user last logged into OmniVista. Possible types of messages include: autodiscovery status, success or failure when attempting to connect to a switch, and status when initializing data.

Status messages can be sorted by clicking in any of the column headings.

Status messages can be copied to the clipboard, then pasted into a text processor or spreadsheet. To copy status information, select one or more rows from the Status table, then right-click to bring up the pop-up menu. When the pop-up menu appears, click **Copy**.

Status messages can also be cleared from the table. Select the rows you want to remove, right-click to bring up the pop-up menu, then select **Clear**.

Notifications Tab

When the Notifications Tab is selected, the Status & Notifications pane shows a list of notifications from *all* switches configured to send trap notifications to the OmniVista server. This is the same list that displays through the Notifications application when the Switches node is selected. (For information on how to configure switches to send trap notifications, see the Configure Traps help.)

The Notifications Tab

Name	Agent	Synopsis	Agent Name	Date/Time
chassisTrapsAlert	10.255.11.189	cmmStartupCompleted CMM startup completed, Object: cmm 66, Index: 66	Eagle_189	Dec 17, 2005 11:50:54 AM
aipAMAPStatusTrap	10.255.11.189	AMAP port 8016 state changed due to remove	Eagle_189	Dec 19, 2005 9:48:29 AM
stpRootPortChange	10.255.11.189	Root port for spanning tree 1 changed to 8004	Eagle_189	Dec 19, 2005 3:39:26 PM

The last, or most recent, trap received is displayed at the bottom of the table. Notifications display in the color representing their severity level. Color values are as follows:

Severity Level	Color
Normal	Blue
Warning	Green
Minor	Magenta
Major	Yellow
Critical	Red

Acknowledging a trap and renouncing an acknowledgement works the same from both the Notifications application and the Status and Notifications Pane. Select one or more rows in the Notifications table, then right-click to display the pop-up menu. Click on **Acknowledge**, **Renounce Acknowledgement**, or **Resize Columns**.

When notifications are first received, they display in bold type. After you acknowledge a notification, it changes to plain type. If you renounce an acknowledgement, it changes back to bold type.

Notifications can be sorted by clicking in any column heading. For example, click in the column heading "Acknowledged" to see trap notifications grouped as acknowledged ("true") or not yet acknowledged ("false"). Generally, you would acknowledge a notification after you have reviewed it, taken any necessary action, and no longer need to have it flagged. Acknowledging a trap notification does not in any way affect the display of the Trap Notification icon (🔔). The Trap Notification icon remains displayed until you left-click on any row in the Notifications table (for details, see the Trap Notification Icon discussion below).

Notifications cannot be copied or cleared from the Status & Notifications Pane. Those options are available through the pop-up menu in the Notifications application, but not the pop-up menu in the Status & Notifications Pane.

The Status Bar

The Status Bar shows session status information, as opposed to the Status Tab in the Status & Notifications Pane, which shows application status.

The left-hand side of the Status Bar shows the current application, the active user, and the server name or server IP address. In the following example, Topology is the current application, admin is the active user, and the IP address of the server is displayed.

On the right-hand side of the Status Bar in the example above are a Secure Socket Layer (SSL) status icon, five polling cycle indicators, and two status indicators and :

 The **SSL Status Icon** displays when the current server connection is using SSL, which can be set at installation time or by using the Preferences application. No icon is displayed when you are not logged in or you are logged into a server without using SSL.

 The **Polling Cycle Indicators** show when regular polling cycles are invoked. These five indicators are described below, where square brackets with an "X" ("[X]") indicates the light is on and square brackets without an "X" ("[]") indicate the light is off:

[] [] [] [] []	No poll in progress
[X] [] [] [] []	"Down Switch" poll in progress
[X] [X] [] [] []	"Frequently" poll in progress
[X] [X] [X] [] []	"Regularly" poll in progress
[X] [X] [X] [X] []	"Rarely" poll in progress
[X] [X] [X] [X] [X]	"Auto-Discovery" poll in progress

 The **Status Indicator Light** shows the status of the current data request. Color states are as follows:

Green	Request for data successfully completed.
Yellow	Request for data in progress.
Red	Request for data failed.

 The **Notifications Receive Indicator** displays whenever the server receives a new trap. To dismiss the icon, left-click on any row in the Notifications table (you can do this from either the Notifications application or the Status & Notifications Pane).

Selecting Switches

Certain applications require that you select one or more switches before you can begin using that application, or before you can begin using a particular function within that application. In general, there are two ways to select switches, either from a switch table (such as the "All Discovered Devices" table in Topology or the "Select Devices" table in Health), or from a switch tree.

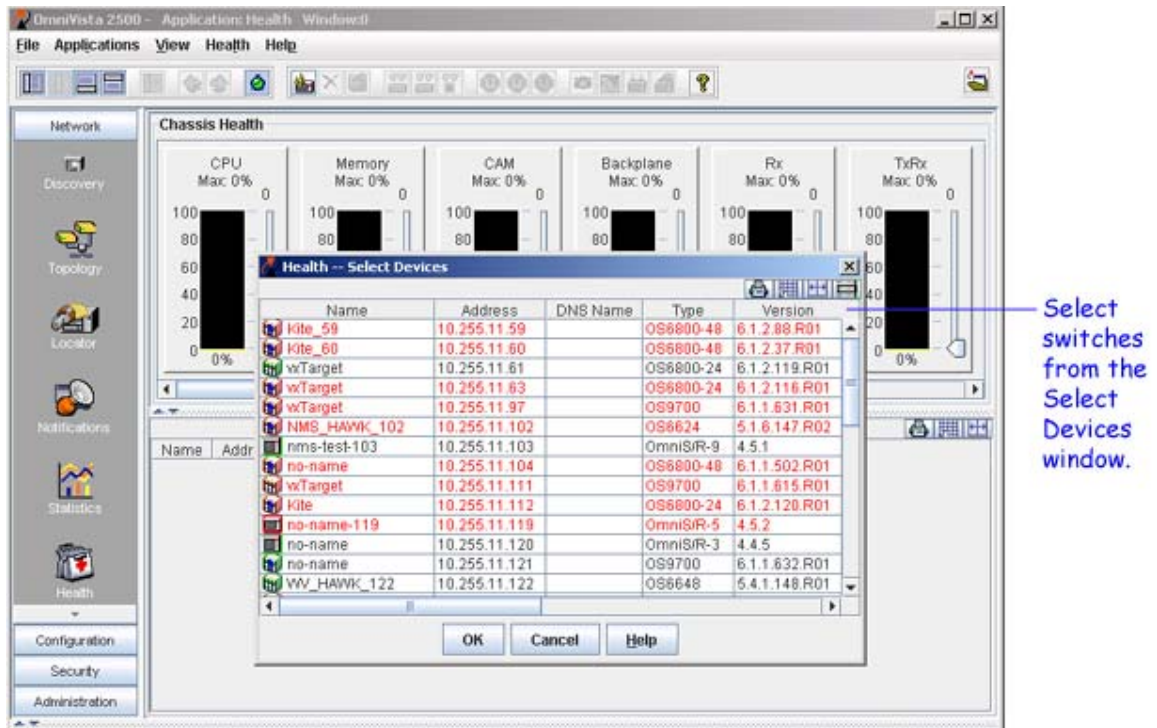

Selecting Switches from a Table

When selecting switches from a table, the Shift and Ctrl keys can be used to select multiple switches. After selecting switches, you can usually right-click to bring up a pop-menu, from which you can select an action to apply to the switch or switches. For example, from the Topology pop-up menu you can Edit, Remove, Poll, or create a switch Inventory for the selected switches.

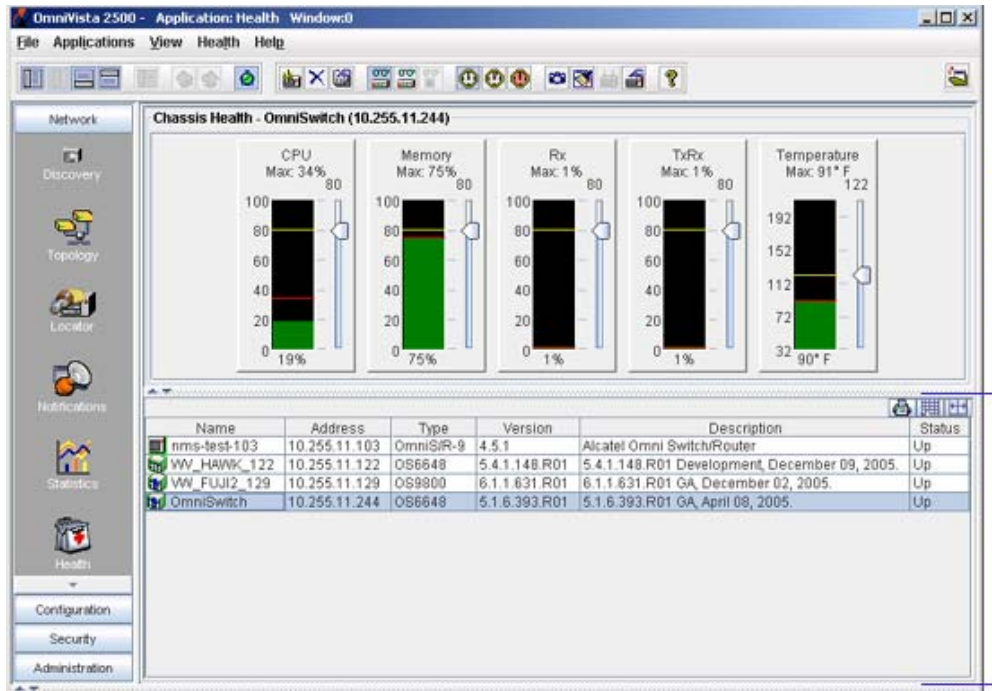

In general, when you select multiple switches, this results in the switches being pre-selected and displayed in some other area. The following examples from Health and Topology illustrate.

Example 1

As soon as you launch the Health application, the Select Devices window displays, prompting you to select one or more switches for which you want to view health information.

After you make your selections, the switches appear in the List Pane as pre-selected items (see the below illustration). If you do not pre-select the switches, you will need to add them manually later on.

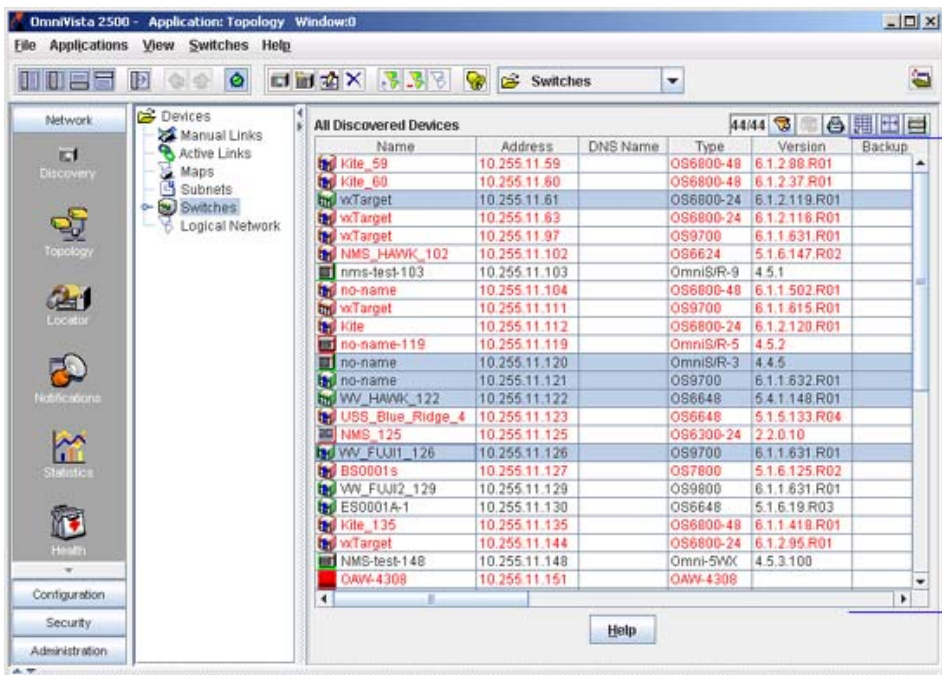

Selected switches display in the List Pane as pre-selected items.

List Pane

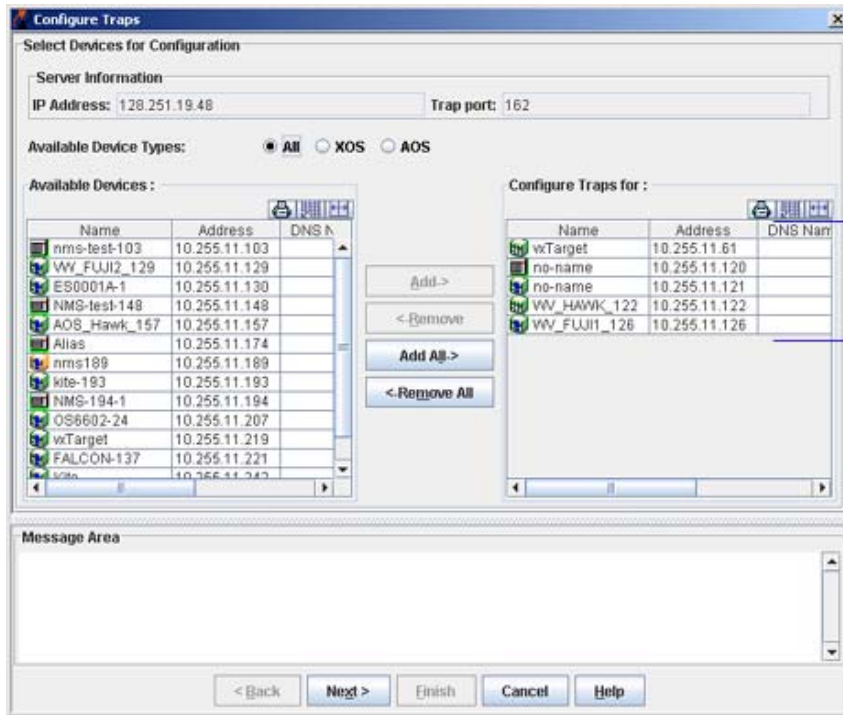

Example 2

Select multiple switches from the "All Discovered Devices" table, then launch the Configure Traps wizard

Select switches from the All Discovered Devices table.

The switches will be displayed as pre-selected items in the Configure Traps window.

The switches that were selected through the All Discovered window now appear in the Configure Traps window as pre-selected items.

Selecting Switches from the Switch Tree

When using the switch tree, you can only select one switch at a time. You cannot select multiple switches, as you can using the switch table. Right-clicking on a switch in the switch tree will also bring up a pop-up menu.

Using Multiple Windows

You can run multiple applications in a single window or in multiple windows.

Running applications in a single window

You can open as many applications as you want in a single window. However, only one application displays at a time. While the current application is displayed, the others continue to run in the background. To display a different application, simply click on its icon in the application tray.

Running Applications in a Single Window

The screenshot shows the OmniVista 2500 application window. The main interface displays network configuration details for a device named 'vxTarget (10.255.11.61)'. The application tray at the bottom of the window contains three icons: 'Topology', 'Notifications', and 'Audit'. A blue box highlights these three icons, and a blue arrow points from the text below to the 'Topology' icon.

Date	Application	Type	Info	Polling servic
Mon Dec 19 10:11:00 PST 2005	OmniVista	Info		Polling servic

Status	Notifications	Topology	Notifications	Audit
Topology	admin	128.251.19.48		

Three applications are running in a single window.
Topology is the current application.
Notifications and Audit are running in the background.

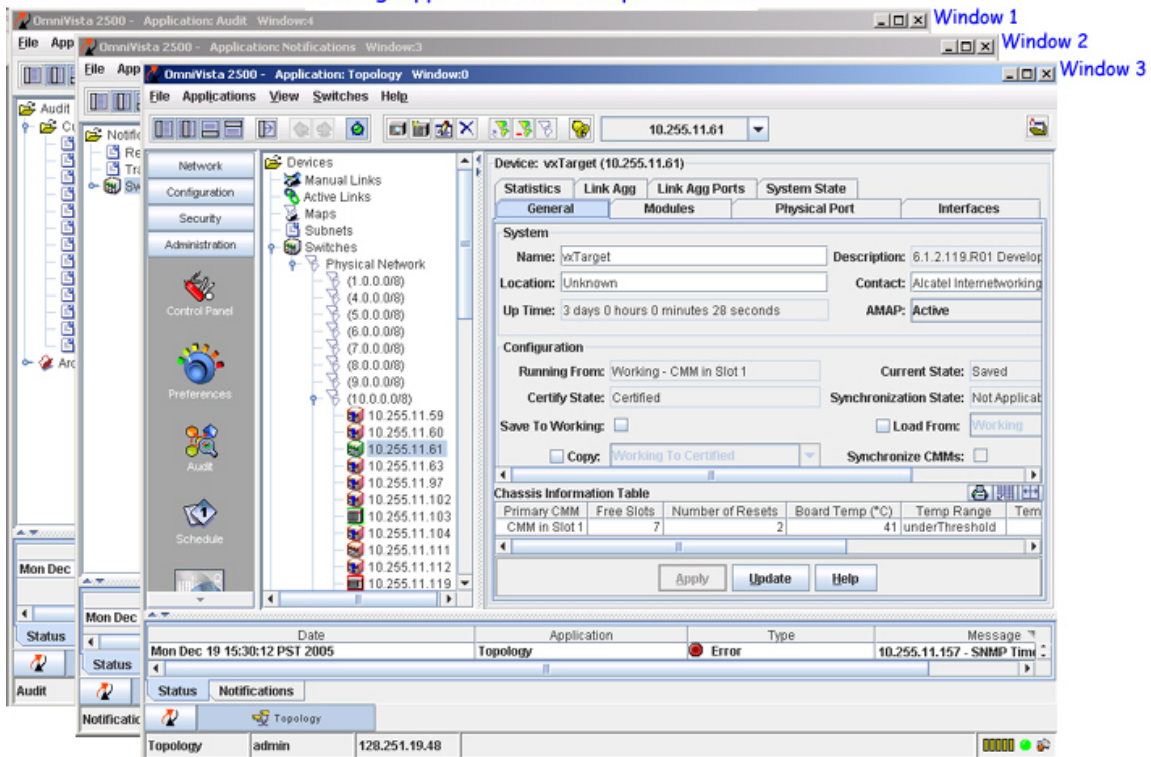

Running applications in multiple windows

Instead of running all your applications in a single window, you can use multiple windows. To open an application in a new window, right-click on its icon in the taskbar. When the pop-up menu appears, select **Run in new Window**.

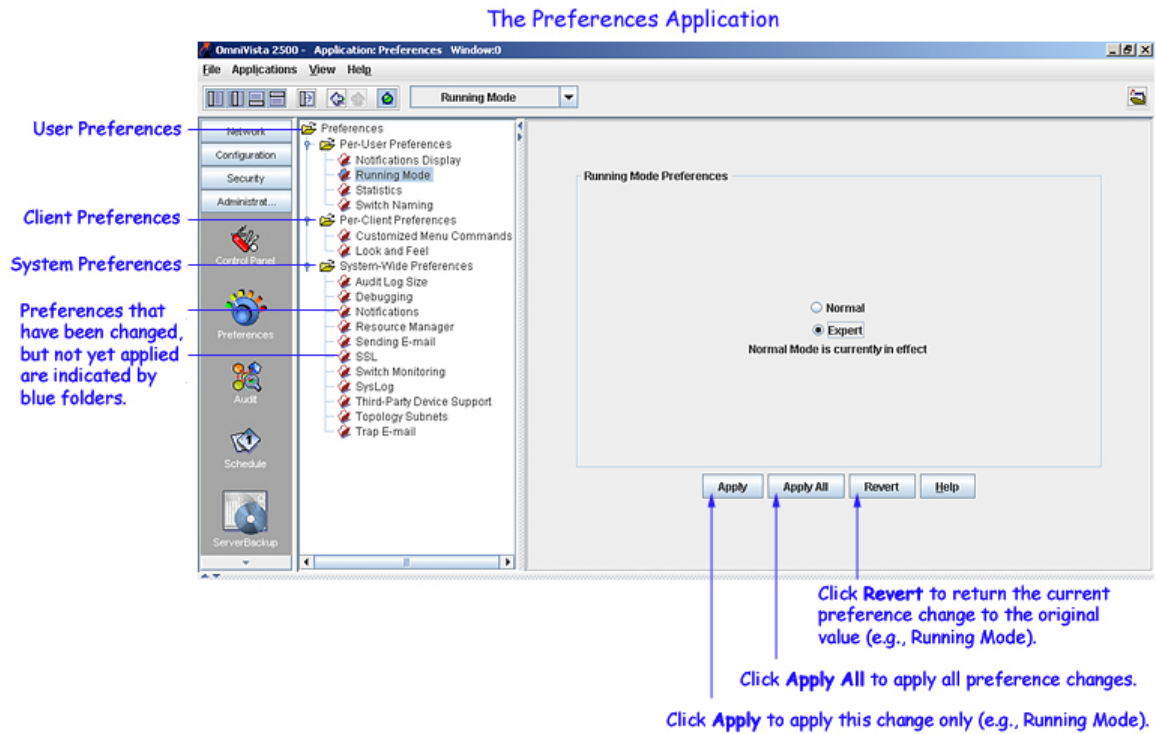

You can have as many windows open as you like. When more than one window is open, you can switch back and forth between applications by clicking on a different window.

Running Applications in Multiple Windows

Setting Preferences

Preferences are displayed and configured in the Preferences application, which is shown below. See the online help for Preferences for more information.

Sorting Data

Use the Sort button to sort information in a table. The Sort button is not displayed by default. To display the Sort button, click in the column header you want to sort by.

To display the Sort button,
click in a column header.

Name	Address	DNS Name	Type	Version
Alias	10.255.11.174		Omni-3WX	4.4.5
AOS_Hawk_157	10.255.11.157		OS6624	5.1.6.140.R02
BS0001s	10.255.11.127		OS7800	5.1.6.125.R02
ES0001A-1	10.255.11.130		OS6648	5.1.6.19.R03
FALCON-137	10.255.11.221		OS7800	5.3.2.118.R01
Fuji-181	10.255.11.161		OS9700	6.1.1.620.R01
Kite	10.255.11.112		OS6800-24	6.1.2.120.R01
Kite	10.255.11.242		OS6800-48	6.1.2.116.R01
kite-193	10.255.11.193		OS6800-L48	5.3.1.7.R04

Click once to sort in ascending alphanumeric order. Click again to sort in descending order.

Using the Help System

Accessing Help

There are two ways to access help information. You can access help through the menubar, or you can click on the Help button in an application window.

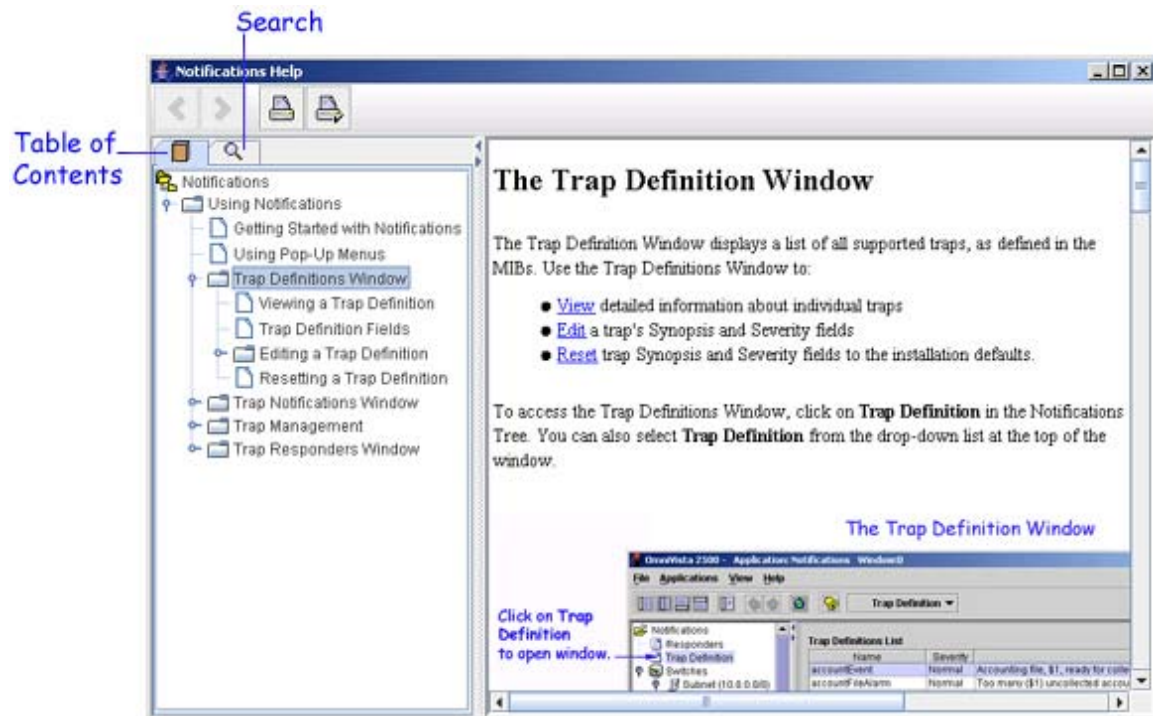

Using the Help menu, you can select help for all of OmniVista (**Help > OmniVista 2500 Help**), or you can select help for the current application only (**Help > [Application Name] Help**, e.g., Topology Help).

When the Help button is used, OmniVista displays **screen-level context-sensitive help**. This means that the help information is specific to your current screen location.

Finding Information

Table of Contents

To see a list of help topics, click on the Table of Contents tab . Find the topic that interests you, then view the information through the adjacent window. If the help page contains a large or complicated graphic, it may take a few seconds for the page to display.

Search Tool

To find a word or topic quickly, use the **Search** tool. To learn how to use the Search tool, follow the numbered steps in the example below.

1. Click on the Search tab.

2. Enter the word or phrase you want to locate, then press Enter.

Number of instances that were found

Probability index

4. Each search result is highlighted.

Click on Trap Definition to open window.

3. The Search tool lists each location where the word or phrase is mentioned. Click on a location to find the desired Search results.

The **Trap Definition Window**

The **Trap Definition** window displays a list of all the supported traps, as defined in the MIBs. Use the **Trap Definitions** window to:

- **View** detailed information about individual traps
- **Edit** a trap's Synopsis and Severity fields
- **Reset** trap Synopsis and Severity fields to the installation defaults.

To access the **Trap Definitions** pane, click on **Trap Definition** in the Notifications tree. You can also select **Trap Definition** from the drop-down list at the top of the window.

The **Trap Definition Window**

Name	Severity	Synopsis	Def
loginViolation3	Normal	Login attempt failed due to invalid ID or password	Def
loginViolation0	Normal	Login attempt failed due to invalid ID or password	Def
loginViolation0	Normal	Login attempt failed due to invalid ID or password	Def
loginViolation0	Normal	Login attempt failed due to invalid ID or password	Def
loginViolation0	Normal	Login attempt failed due to invalid ID or password	Def
loginViolation0	Normal	The originating system has removed a flow from its classifier. rsvp0.	Def

When a phrase of two or more words is entered, the Search tool finds all instances of that phrase, as well as all instances of each word in that phrase.

The probability index shows the likelihood that the desired match was found. A filled circle ● represents a higher probability than a partially filled circle ◐.
