

Apple Internet Connection Kit

.....
Installing from the CD

If you are connecting your Macintosh to the Internet for the first time, double-click the Internet Dialer icon in the Apple Internet Connection Kit folder and follow the Easy Install process. If you already have an Internet access provider, or if you are connected to a local area network (LAN) that has Internet access, you should follow the Custom Install process.

Once you have selected and registered with an Internet access provider, the provider will be able to assist you with

- **basic product use**
- **application programs included in your kit**
- **billing**
- **connecting to the Internet**

If you are connected to a LAN that has Internet access, your network administrator should be able to assist you with the software in your kit.

A manual and Apple Guide have also been included in the package to assist you with your software.
