**Subject: KX-TD500 System Day/Night Mode Change**

**Document Number: KXTD5000004**

KX-TD500 (Version V2M) has 4 operating modes, DAY – LUNCH – BREAK – NIGHT and there are also two options on mode changes, Manual mode and Auto mode.

If the system is operating in an AUTO-change mode and a Manager or Operator forces a different mode, the Auto mode is cancelled. The Manager or Operator must re-enable Auto mode by dialing the Auto mode feature code. However, this will only be applied at the next scheduled change.

It is recommended that the Operator/Mgr enters the feature code for the desired mode first and then enter the feature code for enabling Auto Mode.
