## GENERAL INFORMATION

Your PERCEPTION electronic key telephone (EKT) has been designed to provide easy access to the wide range of features offered by your Toshiba telephone system. The EKT is equipped with a dial pad, 14 or 24 feature keys, a speaker with volume control, and a handset.

All the feature keys are plainly marked as to their purpose: the four horizontal keys have fixed assignments: **SPKR** , turns speaker on and off in speakerphone mode; **MUTE** , mutes microphone during speakerphone mode; **CONF** , used to transfer and conference calls; and the **HOLD** key holds calls. The remaining 10 or 20 keys are assigned flexibly as station directory numbers (DN), private line keys, or as access keys for the various features.

The voice and ring tone volume levels on the PERCEPTION EKT are controlled by separate volume controls located on the rear of the telephone. The control on the right-hand side adjusts speaker volume for dial tone, and voice level; the left-hand side control adjusts ring tone and voice-announcement volume.
