SMIS Version 1.5 Software Release

The Strata DK Software Management Information System (SMIS) software is enhanced in Version 1.5. This version 1.5 software corrects several problems reported from the field. Upgrade software is available from Toshiba Technical Support.

Version 1.5 includes the following enhancements/changes:

- ♦ **Work Unit Reports** – Eliminates various system crashes caused by reports that were being printed when the period (top of the hour) ended.
- ♦ **LOG file** – Open/close errors while running work unit reports have been resolved.
- ♦ **Real Time Displays** – Data for all agents can be displayed. The data accuracy was not affected. The number of agents that can be shown on the Agent Statistics and Agent Status Displays is no longer limited and scrolling calculations have been corrected.

Installing the Software

1. Copy the file SMIS15.exe into the directory for SMIS (typically, **c:/SMIS**).
2. Go to the SMIS directory and type **SMIS15** and press **Enter**. Four files are extracted and a message appears asking if you to want to overwrite the existing file.
3. Enter **y** for yes. When done, the four files should be:

Admin.crs	14 KB	4/28/95	12:15 a.m.
Admin.exe	207 KB	9/4/96	4:59 p.m.
SMIS.exe	311 KB	4/29/98	11:13 a.m.
SMIS.hlp	4 KB	7/19/93	3:36 p.m.

4. Go to “Running the SMIS Program” on Page 1-5 of the *SMIS Manual* to continue.
