

Strata AirLink Wireless Handset Software Upgrade

The Strata AirLink Wireless Handset software can be upgraded to version 24.4D2. This new version uses the function button (**FCN**) + **10** to display the handset software version, instead of accessing system configuration.

► **To access the system configuration menu**

1. Press **PWR**.
2. Enter **1 + 2 + 3 + 4**.
3. Press **#**.
4. Press **FCN**.
5. Scroll down to **SYS CONFIG** using ▼.
6. Enter the appropriate changes to **SYS CONFIG**.
7. Press **END**. The handset returns to an idle state and your changes are saved.

WARNING! Do not change any other settings while in **SYS CONFIG** because it could impact the operation of the handset. Contact your System Administrator for assistance.
