TOSHIBA

Announcing the Stratagy 24 Plus

In response to customer needs for more advanced and powerful computing, Toshiba America Information Systems is proud to announce the immediate availability of a Pentium®-based Stratagy voice processing system – Stratagy 24 Plus. Stratagy 24 Plus is tailored specifically to address the market needs where power, scalability, and flexibility are of paramount importance.

The Stratagy 24 Plus is a PC-based voice processing system that includes an Intel® Pentium® 200 MHz Central Processing Unit (CPU). It comes standard with 4MB RAM, 3.5" floppy drive, VGA white monitor, keyboard, and a hard drive providing up to 33 hours of voice storage. The system comes configured with a four-port Rhetorex voice board, and can be expanded up to 24 ports. Our standard Stratagy two-year warranty is included with the Stratagy 24 Plus.

The Stratagy 24 Plus is year 2000 compliant and uses Release V24.225 software. With the addition of fax modems, Stratagy 24 Plus can also support fax messaging, fax back, and fax on demand capabilities. Using token programming, it can also support Interactive Voice Response (IVR) applications.

Like all other Stratagy products, the Stratagy 24 Plus can incorporate Dual Tone Multi-frequency (DTMF) in-band signaling or Simplified Message Desk Interface (SMDI) integration with the Strata DK and other manufacturers' telephone systems.

Stratagy 24 Plus is your ideal platform choice for present and future voice processing applications. You and your customers will truly appreciate more computer power in telephony messaging.

Upgradable to Stratagy ES

In addition to being able to provide today's voice messaging applications, Stratagy 24 Plus can be upgraded in the future to a Stratagy Enterprise Server; thus, providing investment protection for the future. Details of the upgrade program will become available during the introduction of Stratagy ES, later this year.

Hardware Description

Stratagy 24 Plus uses passive backplane Single Board Computer (SBC) architecture – a technology where active circuitry that is normally found on a PC motherboard is moved onto a plug in circuit card for improved reliability and scalability. Stratagy 24 Plus features a 200 MHz Intel Pentium processor and has six ISA slots for voice boards.

Software/Feature Description

The Stratagy 24 Plus ships with Release 2.25 Stratagy software. All Release 2 features function the same on the Stratagy 24 Plus as they do on all other PC-based Release 2 Stratagy systems.

The optional fax/modem(s) on Stratagy 24 Plus can be used to provide Fax Messaging, Fax on Demand and Fax Back.

The Stratagy 24 Plus comes preprogrammed for operation with the Strata DK424 systems, and can be plug-and-play configured to work with other Strata DK telephone systems or configured to work with other manufacturers' telephone systems.

The Stratagy 24 Plus supports these Toshiba telephone systems:

♦ Strata DK14/DK8 – all releases

♦ Strata DK40i/DK40/DK16e/DK16 – all releases

♦ Strata DK424/DK280 – all releases

♦ Strata DK24/DK56/DK96 – Release 4

Optional Equipment

The following equipment is available from Toshiba as options:

♦ 2400 baud modem (SG-RMOD) for remote maintenance

♦ Two port Rhetorex voice boards (SG-P2R)

♦ Four port Rhetorex voice boards (SG-P4R)

♦ Fax/modem(s) (SG-FMOD) - system accommodates up to two modems.

♦ Remote Modem
