

AVAILABILITY OF MONITOR AND KEYBOARD FOR STRATAGY 4 & 6 VOICE PROCESSING SYSTEMS

In response to requests from our dealers, Toshiba is pleased to announce the ability to add a monitor and keyboard to the Strategy 4 and 6 hardware platforms.. Both of these basic systems are factory equipped with a monochrome video card and keyboard connector, and both the Strategy 4 software and the Strategy 6 software will enable the addition of a monochrome monitor and keyboard.

Toshiba is offering a VGA video card (as a replacement for the monochrome card that is contained in the Strategy 4 and Strategy 6 basic systems) and a VGA white monitor. Both of these components, as well as the keyboard, are the same as those for the Strategy 24.

For those Strategy 4 or Strategy 6 installations where a monitor is preferred, VGA will enable your customer to take full advantage of future enhancements and software upgrades, while monochrome monitors are becoming obsolete and are very limited in availability. Therefore, a monochrome monitor will not be offered. The SO-MM part number is actually a VGA white monitor.

A Strategy 4 or Strategy 6 basic system cannot be ordered with a VGA video card pre-installed, it must be installed by the dealer. Please note the following parts are required to add a monitor and keyboard to a Strategy 4 or Strategy 6 system:

Item	Description	Requirements
SG-KEYB	Strategy 4/6/24 Keyboard.	As desired for upgrades or spares.
SG-MM	Strategy 4/6/24 VGA White monitor.	As desired for upgrades or spares.
SG-VC24	Strategy 4/6/24 VGA Video controller card.	As desired for upgrades or spares.

Please refer to the Strategy Price List for pricing information.

Important! *Retain the original video card from the Strategy 4 or Strategy 6 system for spares. Toshiba will **not** accept returns of this item for credit.*
