NEW STRATEGY VOICE BOARDS

Effective immediately TSD is shipping new Strategy Voice Boards. The new boards are physically half the size of the current boards, but are functionally equivalent to the current boards. In addition, the pricing of the new half size boards remains the same. Therefore, the current part numbers; SG-P2R (2 ports) and SG-P4R (4 ports) will not change.

Rhetorex, the Strategy Voice Board manufacturer, has discontinued the full size boards in favor of the new and improved technology of the half size boards for its larger customers. TSD has completed extensive testing of the new half size boards, which are completely interchangeable with the full size boards in multi-board configurations within all Strategy systems.

Addressing and installing the new Strategy half size voice boards

Addressing and installing the new Strategy half size voice boards is accomplished via the current Strategy Installation & Maintenance Manual, Installation Section, (Chapter 3, pages 3-4 and 3-5). However, since the new half size boards are physically different, the jumper pins are located in a different area (see figure below) on the board. All other procedures for addressing and installing the new Strategy half size voice boards do not change.
